	Answer the questions on Sparx Science	Answer the questions on Sparx Science		

Week 8 10th June 2024	Complete 1 page of retrieval quizzing	Complete the exam question.
	RAG rate the questions	Fill the remainder of the page with retrieval quizzing on your Red and Amber questions
	Answer the questions on Sparx	
	Science	Answer the questions on Sparx Science

# WEEK 1 Questions (cover and quiz) - Chemical Changes

Question	Answer
What term describes a substance that attacks metals,	
stonework and skin?	Corrosive
What type of substance turns litmus paper red?	Acid
What happens in all chemical reactions?	New substances are formed.
What kind of reaction occurs between an acid and an	
alkali?	Neutralisation
What do you call a solution which is neither acidic nor	
alkaline?	Neutral
Give the name and formula of a common laboratory acid.	Hydrochloric acid (HCI), nitric acid (HNO <sub>3</sub> ), sulfuric acid (H <sub>2</sub> SO <sub>4</sub> ), etc
Which ion is in excess in all acid solutions?	Hydrogen ions or H+ ions
Which ion is in excess in all alkali solutions?	Hydroxide ions or OH– ions
What scale is used for measuring acidic and alkaline	The nH scale
Name three examples of acid/alkali indicators apart from	
universal indicators.	Litmus, methyl orange and phenolphthalein
What pH values are acidic?	Below 7
What happens to the pH as the H+ ion concentration	
increases?	It decreases
If a solution has the same concentration of hydrogen	
ions as hydroxide ions, how is it described?	Neutral or pH = 7
What word describes a solution that contains a large	
amount of solute in a small volume of solvent?	Concentrated
How can a solution be made more dilute?	By adding solvent/water
What kind of reaction occurs between an acid and a	
base?	Neutralisation
What is formed when an acid reacts with a base like a	
metal oxide?	Salt + water
What acid would be used to make zinc sulphate from	
zinc oxide?	Sulfuric acid
What process can be used to separate an insoluble	
solid from a liquid?	Filtration
How can a sample of a dissolved salt be obtained from	
a sait solution?	Evaporation of the water

### **Questions (cover and quiz) - Homeostasis**

Name three internal conditions in the body that are	
controlled.	Temperature, water level, blood glucose concentration.
	The regulation of the internal conditions of a cell or
	organism to maintain optimum conditions in response to
What is the definition of homeostasis?	internal or external changes.
Why do the internal conditions of a cell or organism	To maintain optimal conditions for enzyme actions and
need to be maintained?	cell functions.
Which two types of responses are used in homeostasis?	Nervous and chemical response.
What are the three main features of a control centre?	Receptors, coordination centres and effectors.
What do receptors do?	Detects changes in the internal or external environment.
What do coordination centres do?	They receive and process information from receptors.
What do effectors do?	They bring about responses to stimuli.
What keyword refers to a change in the internal or	
external environment that can be detected by	
receptors?	Stimulus.
Which type of neuron connects a receptor to a	
coordination centre?	A sensory neuron.
Which type of neuron connects a coordination centre to	
an effector?	A motor neuron.
What are the two types of effector?	Muscles and glands.
What is a nerve?	A bundle of neurones.
What is the central nervous system made up of?	The brain and the spinal cord.
	An automatic response that does not involve conscious
What is a reflex reaction?	thought.
	Stimulus, receptor, sensory neuron, relay neurone
	(coordination centre), motor neurone, effector,
List the parts of a reflex arc in order.	response.
What are the three types of neurons?	Sensory neuron, relay neurone, motor neurone.
What connects a sensory neuron to a motor neuron?	A relay neurone.
	The pathway of structures involved in an automatic
What is a reflex arc?	(reflex) reaction.
What is the junction between two neurones called?	A synapse.
What name is given to chemicals that diffuse across a	
synapse?	Neurotransmitters
Which two organ systems are involved in homeostasis?	The nervous system and the endocrine system.
Which part of the body releases hormones?	Glands.
How are hormones carried around the body?	In the blood.
	A chemical messenger that is carried in the blood and
What is a hormone?	affects a target organ (or organs).
Which body system involved in homeostasis causes	
fast, short lasting responses?	The nervous system.

Date: 15th April 2024 Week 1 Task 1 - 1 Page of retrieval quizzing - do not use full sentences		

#### Date: 15th April 2024

Week 1 Task 2 - Complete the exam question then fill the remainder of the page with retrieval quizzing. Use full sentences for the exam question, but not the quiz.

A stimulus from the hot pan will cause the muscle in the arm to contract and move the finger away. Describe how the stimulus from the hot pan reaches the muscle in the arm.(4)

Improvement Work: Describe how the stimulus from the hot pan reaches the muscle in the arm.(4)

# WEEK 2 Questions (cover and quiz) - Forces

Question	Answer
Newton's second law can be expressed as an equation	Answei
Write down the equation.	Resultant force = mass x acceleration
What is the equation linking acceleration, change in	
velocity and time?	acceleration = change in velocity / time
What is the SI unit of velocity?	metres per second
	metres per second per second   metres per second
What is the SI unit of acceleration?	squared
Write down the definition of inertia.	The tendency of objects to continue in their state of rest or of uniform motion.
	No resultant force = no change in motion (object carries
What is Newton's first law of motion?	on moving at constant speed or remains stationary)
	If there is a resultant force, then the object's velocity will
	change (either speed or direction of motion), i.e. it will
What is Newton's second law of motion?	accelerate or decelerate.
	When two bodies interact, they apply forces to one
	another that are equal in magnitude and opposite in
What is Newton's third law of motion?	direction
What is the acceleration of an object in free fall on the	
earth's surface?	9.81 metres per second squared
When a parachutist first jumps out of an aeroplane, is the resultant force large, small, or zero?	LARGE - weight much bigger than drag force.
As the parachutist's speed increases, does the resultant	DECREASE - drag force increases as speed increases
force increase or decrease?	but weight remains constant.
When the parachutist reaches top speed, is the	ZERO - drag force equal to weight so the parachutist
resultant force large, small, or zero?	stops accelerating.
What is the maximum speed reached by an object called?	Terminal velocity
	Make them more streamlined to reduce drag; increase
How can the maximum speed of objects be increased?	force supplied by the engine.
Triple: True or False: The Moon orbits the earth in	
approximately a circular orbit. It travels at constant	FALSE - its direction constantly changes therefore it
speed. This means it is not accelerating.	constantly accelerates.
<b>Triple:</b> In which direction does the Moon accelerate as it orbits the Earth?	Towards the Earth
What is the equation linking momentum mass and	
velocity?	Momentum = mass x velocity
What is the symbol equation linking momentum, mass and velocity?	p = m x v
What are the units of momentum?	kam/s
	Total momentum before an event = total momentum
What is the law of conservation of momentum?	after the event, in a closed system.
What is meant by a closed system?	A system in which no matter can enter or escape.
Triple: Why do bike helmets / crash barriers / seat belts	Increases the time over which a change in momentum
/ airbags reduce the force on a person in the event of a	happens, which reduces the rate of change of
crash?	momentum, i.e. the force.
Triple: What equation links moment, force and	
perpendicular distance?	Moment = force x perpendicular distance
Triple: What are the units of moments?	Newton Metres (Nm)
	Sum of clockwise moments = sum of anticlockwise
Triple: State the principle of moments.	moments for an object at equilibrium.

### **Questions (cover and quiz) - Chemical Changes 2**

In general, what is the pH of an alkaline solution?	Greater than 7
What colour is the litmus paper in acidic solutions?	Red
What name is given to substances that react with acids	
to form a salt and water only?	Bases
Which salt is formed when copper oxide reacts with	
sulfuric acid?	Copper sulphate
What type of solution has a pH of 7?	Neutral
Name the salt produced when sodium hydroxide reacts	
with hydrochloric acid.	Sodium chloride
What name is given to substances that are soluble	
bases?	Alkalis
Name a piece of apparatus used to measure volumes of	
liquid.	Measuring cylinder/ pipette/ burette
Name the separation method used to produce crystals	
from a solution.	Crystallisation
Name the acid needed to make ammonium nitrate.	Nitric acid
Which acid is needed to make copper sulphate?	Sulfuric acid
Which base is needed to make copper sulphate?	Copper oxide
What is the name of the salt formed from zinc oxide and	
hydrochloric acid?	Zinc chloride
Which gas is formed when dilute hydrochloric acid	
reacts with magnesium?	Hydrogen
Which gas is formed when dilute hydrochloric acid	
reacts with magnesium carbonate?	Carbon dioxide
What is the chemical test for hydrogen?	It gives a squeaky pop with a lighted splint
What is seen when magnesium is added to dilute	
sulfuric acid?	Effervescence/ fizzing/ bubbles
Which gas is produced when copper carbonate is added	
to dilute nitric acid?	Carbon dioxide
What is the chemical test for carbon dioxide?	It turns limewater milky.
What do we call the liquid that dissolves a solute to form	
a solution?	Solvent

Date: 22nd April 2024 Week 2 Task 1 - 1 Page of retrieval quizzing - do not use full sentences				
			 	· · · · · · · · · · · · · · · ·

#### Date: 22nd April 2024

Week 2 Task 2 - Complete the exam question then fill the remainder of the page with retrieval quizzing. Use full sentences for the exam question, but not the quiz.

A student investigated how the height of a ramp affects the acceleration of a trolley down the ramp. Plan an investigation to determine how the height of the ramp affects the acceleration of the trolley. (6)

Improvement Work: A student investigated how the height of a ramp affects the acceleration of a trolley down the ramp. Plan an investigation to determine how the height of the ramp affects the acceleration of the trolley. (6)

# WEEK 3 Questions (cover and quiz) - Waves

Question	Answer
What are the two main categories of waves?	Transverse and longitudinal
	A wave for which the oscillations are perpendicular to
What is a transverse wave?	the direction of energy transfer.
	A wave for which the oscillations are parallel to the
What is a longitudinal wave?	direction of energy transfer.
	Electromagnetic waves (e.g. light, X rays), Seismic (S)
Give two examples of transverse waves.	waves, water waves
Give two examples of longitudinal waves.	Sound waves, Seismic (p) waves
What are the two parts of a longitudinal wave called?	Compressions and rarefactions
	The maximum displacement of a point on a wave from
What is a wave's amplitude?	its undisturbed position.
	The distance from a point on a wave to the same
	position on the adjacent wave. Most commonly peak to
What is wavelength?	peak or trough to trough.
	The number of waves that pass a given point each
What is the frequency of a wave?	second / the number of oscillations per second.
What is the unit used for frequency?	Hertz, Hz
	200 waves pass a given point each second / a point
What is meant by a frequency of 200Hz?	oscillates 200 times every second.
What is wave speed?	The speed at which the wave moves through a medium.
What does a wave transfer?	Energy
What is the relationship between frequency, wavelength	
and wave speed?	wave speed = frequency x wavelength
What is the SI unit of wave speed?	metres per second
What is the SI unit of wavelength	metres
What word is used to describe when a wave bounces off	
a surface?	Reflection
	The particles in the solid vibrate and transfer kinetic
How do sound waves travel through a solid?	energy through the material.
Which type of waves do not require a medium to travel	
Unrough?	Electromagnetic waves.
	Radio waves, Microwaves, Infrared, Visible light,
How do the speeds of EM radiation differ in a vacuum	EM waves all travel at the same speed in a vacuum and
and in air?	lin air
At what speed do EM waves travel through a vacuum /	
air?	3.0 x 10 <sup>8</sup> m/s
What word is used to describe when a wave changes	
direction as it moves from one material to another?	Refraction
	They bend towards the normal
In which direction (relative to the normal) do waves	The angle of refraction is less than the angle of
refract when entering a denser medium?	incidence
	They can cause the skin to age prematurely
What health effects can ultraviolet waves cause?	They can increase the risk of developing cancer
	They are ionising radiation so can cause mutations in
	genes.
	I hey can lead to increased risk of developing various
vvnat nealth effects can X-rays and gamma rays cause?	cancers.
Give three practical uses for infrared radiation	Electrical heaters, cooking food Infrared cameras
Give two practical uses for microwave radiation	Satellite communications, Cooking food
Give two practical uses for radio waves.	Television transmission, Radio transmission

### **Questions (cover and quiz) - Homeostasis**

Which body system involved in homeostasis causes	
slow, long lasting responses?	The endocrine system.
Which two hormones can cause rapid responses?	Insulin and adrenaline.
Which hormone is involved in the 'fight or flight'	
response?	Adrenaline.
Which gland secretes several different hormones and	
controls and coordinates other glands?	The pituitary gland.
Where in the body is the pituitary gland?	The brain
Which hormone does FSH (follicle stimulating hormone)	
stimulate the ovaries to release?	Oestrogen.
Which hormone stimulates the release of oestrogen	
from the ovaries?	FSH (follicle stimulating hormone).
Which gland secretes FSH (follicle stimulating	
hormone)?	The pituitary gland.
Which hormone controls blood alucose levels?	Insulin
Where is insulin released from?	
	The pancieds.
	Insulin causes glucose in the blood to move into cells to
What does inculin do?	
How is excess glucose stored in the human body?	As glycogen in the liver and muscles.
Which two hormones interact in a negative feedback	
cycle to control blood glucose levels?	Insulin and glucagon.
Which hormone causes glycogen in the liver to be	
converted back into glucose?	Glucagon.
When is glucagon released by the pancreas?	When blood glucose levels fall below the ideal level.
	Glucagon is a hormone that is released when blood
	glucose concentrations fall below the ideal level,
	glycogen is a complex carbohydrate used to store
What is the difference between glucagon and glycogen?	excess glucose in the body.
Which disease is caused if your pancreas does not	
produce enough insulin?	Type 1 diabetes.
Which disease is caused if your body stops responding	
to insulin made by the pancreas?	Type 2 diabetes.
Which type of diabetes usually starts in young children	
and teenagers?	Type 1 diabetes.
Which type of diabetes is more common in older	
people?	Type 2 diabetes.
Which type of diabetes is linked to obesity and lack of	<b>T O N I I</b>
exercise?	Type 2 diabetes.
Which type of diabetes is usually treated with insulin	<b>- - - - - - - - - -</b>
	Type 1 diabetes.
Which type of diabetes is first treated with a controlled	
diet and exercise?	Type 2 diabetes.
which normone stimulates basal metabolic rate and has	The manufact
a role in growth and development?	i nyroxine.
Which gland releases thyroxine?	I he thyroid gland.
Which hormone is released by the adrenal glands	
during times of fear or distress?	Adrenaline.
Which glands release adrenaline?	The adrenal glands.
	It increases heart rate to increase the delivery of oxygen
What is the effect of adrenaline on the body?	and glucose to the brain and muscles.
Is adrenaline or thyroxine controlled by negative	
feedback?	Adrenaline.

Date: 29th April 2024 Week 3 Task 1 - 1 Page of retrieval quizzing - do not use full sentences	
······································	
······································	
······································	

#### Date: 29th April 2024

Week 3 Task 2 - Complete the exam question then fill the remainder of the page with retrieval quizzing. Use full sentences for the exam question, but not the quiz.

Explain how the hormones insulin and glucagon keep the blood glucose concentration at the correct level in a healthy human body. (5)

Improvement Work: Explain how the hormones insulin and glucagon keep the blood glucose concentration at the correct level in a healthy human body. (5)

### WEEK 4 Questions (cover and quiz) - Organisation

Question	Answer
Which type of tumour can be described as a lump of	
cells that are not invading the body?	A benign tumour.
What key word explains how one factor influences	A could mechanism
What key word describes a link or relationship between	
two factors?	A correlation
What is a non-communicable disease?	A disease which cannot be passed between people
	A method of treating cancer, where cancer cells are
What is radiotherapy?	destroyed by targeted doses of radiation.
What is chemotherapy?	A method of treating cancer, where chemicals are used to either stop cancerous cells dividing, or to make them 'self-destruct'
What is formed by uncontrolled cell division?	
	A furriour. Aspects of a person's lifestyle or environment that are
What are risk factors?	linked to an increased rate of a disease.
What kind of tumours are contained in one place, not invading other parts of the body?	Benign tumours.
What can long term heavy alcohol use lead to?	Brain damage and death.
Give two cancers that have genetic risk factors.	Breast cancer and ovarian cancer.
What are cancer-causing agents called?	Carcinogens.
What diseases can alcohol cause?	Cirrhosis and liver cancer.
What is FAS?	Foetal alcohol syndrome.
What are three substances present in the environment	Ionising radiation, UV light, second hand tobacco
that can be risk factors?	smoke.
What kind of tumours can spread around the body?	Malignant tumour cells (cancer).
What are melanomas?	Malignant tumours are often triggered by exposure to UV radiation (skin cancer).
What risks are linked to drinking alcohol during	Miscarriage, stillbirths, premature births and low
pregnancy?	birthweight.
Exposing a foetus to smoke restricts its levels of?	Oxygen.
What are the two main methods of treating cancer?	Radiotherapy and chemotherapy.
What are three aspects of lifestyle that can be risk factors?	Smoking, lack of exercise, overeating, alcohol consumption.
What can cause cardiovascular disease including	
coronary heart disease, lung cancer, and lung diseases	
such as bronchitis and COPD?	Smoking.
Why is sperm not considered to be a tissue?	Sperm do not work together to perform a function.
Name three different carcinogens.	Tar, alcohol, ionising radiation.
What carcinogen is found in tobacco smoke?	Tar.
Which organ does alcohol damage?	The liver.
	The radiation penetrates the cells, damages the
How can ionising radiation result in cancer?	chromosomes and causes mutations in the DNA.
What do cancer cells do compared to normal cells?	They divide more rapidly and last longer.
What is the danger of a benign tumour?	They grow very quickly, and can put pressure on and damage organs.
How does diet directly affect your risk of diseases?	Through increased levels of cholesterol.
How does diet indirectly affect your risk of diseases?	Through obesity.
Which disease is obesity a strong risk factor for?	Type 2 diabetes.
When does a tumour form?	When cells divide uncontrollably.

# Questions (cover and quiz) - Rates of Reaction

What does a horizontal line on a rate of reaction graph	
mean?	Reaction has stopped
What happens in a reversible reaction between gases in	The equilibrium position shifts in the direction of fewer
an enclosed system when pressure is increased?	moles of gas (to oppose the increase in pressure)
What happens to the gradient of a line if the rate of	
reaction is increased?	Becomes steeper.
	A substance which increases the rate of reaction but is
What is a catalyst?	not used up during the reaction
What is added to anhydrous cobalt chloride to change	
its colour from blue to pink in a reversible reaction?	Water.
Write down a definition of collision theory using the	For a chemical reaction to happen the reactant particles
following keywords: reaction, particles, reactant, energy.	must collide with sufficient energy
What is the definition of concentration in chemistry?	Number of particles in a given volume
,	If a system is at equilibrium and a change is made to
	any of the conditions, then the equilibrium position will
State Le Chatelier's Principle	shift to oppose the change
	Minimum amount of energy that particles must have to
What is meant by the term 'activation energy'?	react
	Forward and reverse reactions occur at the same rate:
What is meant by the term equilibrium?	concentrations of all substances stay constant
	Rate at which reactants are being turned into products /
What is the definition of the rate of a reaction?	rate at which reducts are made
What is the name for the minimum amount of energy	
needed for a reaction to start?	Activation Energy
What is the name of a type of reaction in which the	Activation Energy
products can reform the reactants easily?	Reversible
What is the word for chemicals which react with each	
What is the word for chemicals which react with each other?	Reactants
What is the word for chemicals which react with each other?	Reactants
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached?	Reactants Closed system; apparatus prevents the escape of reactants and products
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at	Reactants Closed system; apparatus prevents the escape of reactants and products
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium?	Reactants Closed system; apparatus prevents the escape of reactants and products
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium? What type of equilibrium exists when the forward and	Reactants Closed system; apparatus prevents the escape of reactants and products Concentration of substances, temperature and pressure
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium? What type of equilibrium exists when the forward and backward reactions happen at the same rate in a closed	Reactants Closed system; apparatus prevents the escape of reactants and products Concentration of substances, temperature and pressure
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium? What type of equilibrium exists when the forward and backward reactions happen at the same rate in a closed system?	Reactants Closed system; apparatus prevents the escape of reactants and products Concentration of substances, temperature and pressure
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium? What type of equilibrium exists when the forward and backward reactions happen at the same rate in a closed system?	Reactants Closed system; apparatus prevents the escape of reactants and products Concentration of substances, temperature and pressure Dynamic equilibrium More hydrogen and nitrogen will be made as the
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium? What type of equilibrium exists when the forward and backward reactions happen at the same rate in a closed system? Use Le Chatelier's principle to explain what will happen if there is an increase in temperature of this reaction	Reactants Closed system; apparatus prevents the escape of reactants and products Concentration of substances, temperature and pressure Dynamic equilibrium More hydrogen and nitrogen will be made as the backward reaction is endothermic. Equilibrium shifts in
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium? What type of equilibrium exists when the forward and backward reactions happen at the same rate in a closed system? Use Le Chatelier's principle to explain what will happen if there is an increase in temperature of this reaction (the forward reaction is exothermic):	Reactants Closed system; apparatus prevents the escape of reactants and products Concentration of substances, temperature and pressure Dynamic equilibrium More hydrogen and nitrogen will be made as the backward reaction is endothermic. Equilibrium shifts in the endothermic direction to oppose the increase in
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium? What type of equilibrium exists when the forward and backward reactions happen at the same rate in a closed system? Use Le Chatelier's principle to explain what will happen if there is an increase in temperature of this reaction (the forward reaction is exothermic): $N_2(\alpha) + 3H_2(\alpha) \Rightarrow 2NH_2(\alpha)$	Reactants Closed system; apparatus prevents the escape of reactants and products Concentration of substances, temperature and pressure Dynamic equilibrium More hydrogen and nitrogen will be made as the backward reaction is endothermic. Equilibrium shifts in the endothermic direction to oppose the increase in temperature
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium? What type of equilibrium exists when the forward and backward reactions happen at the same rate in a closed system? Use Le Chatelier's principle to explain what will happen if there is an increase in temperature of this reaction (the forward reaction is exothermic): $N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$ What will happen to the amount of product in an	Reactants         Closed system; apparatus prevents the escape of reactants and products         Concentration of substances, temperature and pressure         Dynamic equilibrium         More hydrogen and nitrogen will be made as the backward reaction is endothermic. Equilibrium shifts in the endothermic direction to oppose the increase in temperature.
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium? What type of equilibrium exists when the forward and backward reactions happen at the same rate in a closed system? Use Le Chatelier's principle to explain what will happen if there is an increase in temperature of this reaction (the forward reaction is exothermic): $N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$ What will happen to the amount of product in an endothermic reaction (going forward) at equilibrium if	Reactants         Closed system; apparatus prevents the escape of reactants and products         Concentration of substances, temperature and pressure         Dynamic equilibrium         More hydrogen and nitrogen will be made as the backward reaction is endothermic. Equilibrium shifts in the endothermic direction to oppose the increase in temperature.
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium? What type of equilibrium exists when the forward and backward reactions happen at the same rate in a closed system? Use Le Chatelier's principle to explain what will happen if there is an increase in temperature of this reaction (the forward reaction is exothermic): $N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$ What will happen to the amount of product in an endothermic reaction (going forward) at equilibrium if the temperature is decreased?	Reactants Closed system; apparatus prevents the escape of reactants and products Concentration of substances, temperature and pressure Dynamic equilibrium More hydrogen and nitrogen will be made as the backward reaction is endothermic. Equilibrium shifts in the endothermic direction to oppose the increase in temperature. Amount of product (yield) will decrease
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium? What type of equilibrium exists when the forward and backward reactions happen at the same rate in a closed system? Use Le Chatelier's principle to explain what will happen if there is an increase in temperature of this reaction (the forward reaction is exothermic): $N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$ What will happen to the amount of product in an endothermic reaction (going forward) at equilibrium if the temperature is decreased? What will happen to the amount of product in an	Reactants         Closed system; apparatus prevents the escape of reactants and products         Concentration of substances, temperature and pressure         Dynamic equilibrium         More hydrogen and nitrogen will be made as the backward reaction is endothermic. Equilibrium shifts in the endothermic direction to oppose the increase in temperature.         Amount of product (yield) will decrease
What is the word for chemicals which react with each other? What conditions are required for dynamic equilibrium to be reached? What three factors can be changed in a system at equilibrium? What type of equilibrium exists when the forward and backward reactions happen at the same rate in a closed system? Use Le Chatelier's principle to explain what will happen if there is an increase in temperature of this reaction (the forward reaction is exothermic): $N_2(g) + 3H_2(g) \rightleftharpoons 2NH_3(g)$ What will happen to the amount of product in an endothermic reaction (going forward) at equilibrium if the temperature is decreased? Date: 6th May 2024 Week 4 Task 1 - 1 Page of retrieval quizzing - do not use full sentences	

#### Date: 6th May 2024

Week 4 Task 2 - Complete the exam question then fill the remainder of the page with retrieval quizzing. Use full sentences for the exam question, but not the quiz.

Temperature also affects the rate of the reaction. Explain how increasing the temperature affects the rate of the reaction. You should refer to particles and collisions. (3)

Improvement Work: Temperature also affects the rate of the reaction. Explain how increasing the temperature affects the rate of the reaction. You should refer to particles and collisions. (3)

# WEEK 5 Questions (cover and quiz) - Chemical Changes

Question	Answer
When Aluminium oxide is electrolysed what forms at the	
cathode?	Aluminium
Why is electrolysis used to extract aluminium from its	
ore?	Aluminium is more reactive than carbon.
Name the compound from which aluminium is extracted.	Aluminium oxide/ bauxite.
In electrolysis positive ions move towards the?	Cathode (negative electrode)
In electrolysis negative ions move towards the?	Anode (positive electrode)
Where does oxidation happen in electrolysis?	Anode (positive electrode)
Which electrode is connected to the negative terminal of	
an electricity supply?	Cathode (negative electrode)
Which electrode is connected to the positive terminal of	
an electricity supply?	Anode (positive electrode)
Which electrode would you expect to have bromine	
produced at?	Anode (positive electrode)
Where are hydrogen ions produced?	Cathode (negative electrode)
What is the name of the electrode that the negative ions	
move to?	Anode.
How do you test for chlorine gas?	bleaches litmus
What is produced at the anode (positive electrode)	
when lead bromide is electrolysed?	Bromine.
If a metal chloride is being electrolysed what gas will be	
produced?	Chlorine
What do we call a liquid, containing free moving ions,	
which is broken down by electricity in the process of	
electrolysis?	Electrolyte
Why can a molten or dissolved ionic compound conduct	Frank and the state of the stat
	Free moving lons.
What is oxidation?	gain of oxygen / loss of electrons
What is produced at the cathode (negative electrode) is	
the metal in the solution is more reactive than	Lhadas was
nyarogen ?	Hyarogen.
trom its cro2	Large emplite of energy needed
What is produced at the esthade (pegative electrode)	Large amounts of energy needed.
when lead bromide is electrolycod?	l ead
when lead brothide is electrolysed?	Leau.

### **Questions (cover and quiz) - Homeostasis**

What is the main male reproductive hormone?	Testosterone.
Which gland produces testosterone in males?	The testis.
What does testosterone do?	It stimulates sperm production.
After puberty on average how often is an egg released	
from the ovary?	Approximately every 28 days.
What happens at ovulation?	An egg is released from the ovary.
What term refers to 'the release of an egg from the	
ovary'?	Ovulation.
Name the four hormones involved in the menstrual	FSH (follicle stimulating hormone), LH (luteinising
cycle.	hormone), oestrogen, progesterone.
Which hormone causes an egg in the ovary to mature?	FSH (follicle stimulating hormone).
Which hormone stimulates the release of a mature egg	
from the ovary?	LH (luteinising hormone).
Which hormones are involved in maintaining the uterus	
lining?	Progesterone and oestrogen.
At what point in the menstrual cycle does a woman have	
her period?	Day 1-5.
At what point in the menstrual cycle is an egg released?	Day 12-16
Which gland releases LH?	The pituitary gland.
Which gland releases oestrogen?	The ovaries.
What produces progesterone?	The empty follicle after ovulation.
What is produced by the empty follicle after ovulation?	Progesterone.
What is the role of progesterone?	It maintains the uterus lining and inhibits release of FSH and LH.

Date: 13th May 2024	
Week 5 Task 1 - 1 Page of retrieval quizzing - do not use full sentences	

#### Date: 13th May 2024

Week 5 Task 2 - Complete the exam question then fill the remainder of the page with retrieval quizzing. Use full sentences for the exam question, but not the quiz.

Oxygen is formed at the positive carbon electrodes during the extraction of aluminium from bauxite by electrolysis. Explain why the positive carbon electrodes must be continually replaced. (3)

Improvement Work: Explain why the positive carbon electrodes must be continually replaced. (3)

# WEEK 6 Questions (cover and quiz) - Ecology

Question	Answer
	The variety of all the different species of organisms on
What is biodiversity?	earth, or within an ecosystem.
Why is high biodiversity important?	It ensures the stability of ecosystems by reducing the
How do humans reduce the amount of land available for	
other species?	By building, quarrying, farming and dumping waste.
	Habitat destruction (deforestation, building, quarrying,
What human activities reduce biodiversity?	farming), Pollution (air, water, dumping waste)
Why is burning peat as a fuel a problem?	It releases carbon dioxide into the atmosphere.
	Rapid growth in the human population means that
	increasingly more resources are used and more waste
	is produced. Unless waste and chemical materials are
	properly handled, more pollution will be caused
Explain why the increasing human population is a	dependence of one species on another for food, shelter
problem?	and the maintenance of the physical environment.
What pollutes water?	Sewage, fertiliser or toxic chemicals.
What pollutes air?	Smoke and acidic gases.
What pollutes land?	Landfill and toxic chemicals.
	It can kill plants and animals which can reduce
Why is pollution a problem?	biodiversity.
	To provide land for cattle, rice fields and to grow crops
Why are large areas of tropical forests being destroyed?	tor biotuels.
What is deforestation?	The cutting down of large areas of forest.
Which gases in the atmosphere are increasing and	
contributing to global warming?	Carbon dioxide and methane.
	Loss of habitats due to flooding, changes in the
What are the biological consequences of global	distribution of organisms due to changes in temperature
warming?	or rainfall, changes in the migration patterns of animals.
Which gases cause acid rain?	Sulphur dioxide and nitrogen oxides
What problem is caused by increasing levels of carbon	
dioxide and methane in the atmosphere?	Global warming.

### Questions (cover and quiz) - Waves

What is the speed of sound in air?	330 metres per second.
What is the relationship between frequency of a wave	
and its time period?	Frequency = 1 / Time period
	The particles in the solid vibrate and transfer kinetic
How do sound waves travel through a solid?	energy through the material.
What is the frequency range of human hearing?	20 Hertz to 20,000 Hertz (20KHz)
	Waves which have a frequency higher than the upper
What are ultrasound waves?	limit of human hearing (20KHz)
Give an example for ultrasound waves?	Medical or industrial imaging
What natural event causes seismic waves to be	
produced? What types are produced?	Earthquakes; They produce both P-waves & S-waves
What property of waves in different mediums causes	Velocity; Wave speed is slower in denser materials,
refraction?	causing refraction
What type of waves can be produced by oscillations in	
an electrical circuit?	Radio waves
	When radio waves are absorbed, they can induce
How can radio waves generate an alternating current in	oscillations in a circuit with the same frequency as the
a circuit?	waves themselves.
Triple: What wave phenomenon is used by lenses to	
form an image?	Refraction
	Parallel rays of light are refracted and brought together
Triple: How does a convex lens form an image?	at a point known as the principal focus.
Triple: What is meant by the focal length of a lens?	The distance from the lens to the principal focus.
Triple: What is the difference between the image	Convex lenses can produce real or virtual images.
produced by a convex and a concave lens?	Concave lenses can only produce virtual images.
What colour does an object appear if all wavelengths	
are absorbed?	Black opaque
What do all bodies (objects) emit and absorb?	Infrared radiation
What happens to the quantity of infrared radiation	The hotter the object, the more infrared radiation it will
emitted by an object as temperature increases?	emit.
	An object that absorbs all of the radiation that is incident
What is a perfect black body?	upon it.
How much radiation does a perfect black body reflect or	
transmit?	None
	It is a perfect absorber since it absorbs all radiation
Why is a perfect black body the best possible emitter of	incident on it.
radiation?	A perfect absorber is also a perfect emitter
What can be said about the rates of emission and	The body is absorbing and emitting radiation at the
absorption for a body at constant temperature?	same rate.

Date: 20th May 2024	
Week 6 Task 1 - 1 Page of retrieval quizzing - do not use full sentences	

#### Date: 20th May 2024

Week 6 Task 2 - Complete the exam question then fill the remainder of the page with retrieval quizzing. Use full sentences for the exam question, but not the quiz.

Describe the reasons why deforestation takes place and the effects deforestation has on the environment. (6)

# WEEK 7 Questions (cover and quiz) - Organisation

Question	Answer
What do proteins do?	Proteins are used for growth and repair.
What food group is tested using Benedict's?	Simple sugars.
What colour do simple sugars turn Benedict's solution?	Simple sugars turn Benedict's from Blue to Brick Red.
What food group is tested using iodine?	Starch.
Where is lipase produced?	Stomach and pancreas.
What are the two factors that enzyme activity is affected by?	Temperature and pH.
Which organ system absorbs nutrients from food?	The digestive system.
Which organ absorbs water from undigested food?	The large intestine.
Which organ produces bile?	The liver.
What is the name of the theory that explains how enzymes work?	The lock and key theory of enzyme action.
Where is protease produced?	The pancreas.
What does the ethanol test indicate?	The presence of lipids.
In which organs are the products of digestion absorbed into the blood?	The small intestine.
Which organ uses acid to break down large insoluble molecules into smaller soluble molecules?	The stomach.
What is the lock and key mechanism?	The theory of enzyme action.
What do amino acids do?	They are used to form proteins.
What happens to enzymes at high temperatures?	They denature.

# Questions (cover and quiz) - Chemical Changes

Question	Answer
What is reduction?	loss of oxygen / Gain in electrons
What is an ore?	Metal compound in a rock.
What is aluminium oxide mixed with to lower its boiling	
point?	molten cryolite
lonic compounds need to be either	
orto be	
electrolysed	Molten or dissolved in water
Why do ionic compounds need to be molten or	
dissolved to conduct?	lons (i.e. charge carriers) must be free to move.
What does OIL RIG stand for?	Oxidation is Loss, Reduction is Gain
When Aluminium oxide is electrolysed what forms at the	
anode?	Oxygen
If metal sulphate is being electrolysed what gas will be	
produced?	Oxygen
Predict the products of electrolysis of copper sulphate	Positive electrode: Oxygen gas; Negative electrode:
solution	Copper.
Are hydrogen ions reduced or oxidised at the	
electrodes?	Reduced
How are metals, less reactive than carbon, extracted	
from their ores?	Reduction with carbon.
How do you test for oxygen gas?	Relights a glowing splint
What solution have you electrolysed if you get hydrogen	
gas, chlorine gas and sodium hydroxide produced?	Sodium chloride solution (brine)
Which state do ionic compounds not conduct electricity?	Solid
	They gradually decay away (due to reacting with the
Why do the carbon anodes need replacing regularly?	oxygen)
How many electrons does an aluminium ion gain at the	
cathode?	Three
How many electrons do oxygen ions lose at the anode?	Two

# Questions (cover and quiz) - Space (Triple Science Only)

Question	Answer
List the objects found in the solar system	Star planets, dwarf planets, moons / natural satellites
	Mercury Venus Farth Mars Juniter Saturn Uranus
List the planets in order of distance from the sun.	Neptune
Which galaxy is the solar system part of?	Milky Way
List the following from smallest to largest: galaxy	
universe, planet, star	Planet, star, galaxy, universe
What force keeps the planets in orbit around the sun?	Gravity
True or False: The Moon orbits the earth in	
approximately a circular orbit. It travels at constant	FALSE - its direction constantly changes therefore it
speed. This means it is not accelerating.	constantly accelerates.
In which direction does the Moon accelerate as it orbits	
the Earth?	Towards the Earth
A satellite is in orbit around the Earth. If it switches its	
engine on for a short time to increase its speed, what	
will happen to the radius of its orbit?	It will increase.
Protostars can be thought of as clouds of	Dust and gas
Which force pulls clouds of dust and gas together to	
form stars?	Gravity
What process has to begin for a protostar to be	
reclassified as a star?	Nuclear fusion
Which two forces act within a main sequence star?	Gravity and radiation pressure
In a main sequence star, the forces are	Balanced
What is the most abundant element in a main sequence	
star?	Hydrogen
When hydrogen nuclei fuse together, the nuclei of which	
element is formed?	Helium
When smaller stars run out of fuel, what do they	
become?	Red giants
True or false: a red giant is hotter than a main sequence	
star.	FALSE
As the outer layers of a red glant drift away, what is left	W/bite dworf
True or false: a white dwarf is hotter than a black dwarf.	TRUE
When massive stars run out of fuel, what do they	
become?	Red supergiants
True or false: some massive stars fuse together larger	
elements to make heavier nuclei like carbon.	TRUE
What is the largest element that can be made via	
nuclear fusion?	Iron
When nuclear fusion stops in the core of a massive star,	
what happens?	I ne core collapses.
vynen the core of a massive star collapses, what is the	Superpoya
True or false: the beaviort element that can be	
nue of laise. The neaviest element that can be	
What two objects may be left behind after a supernova?	Neutron star or black hole
Why is a black hole called a black hole?	It is so dense that even light cannot escape.

	The apparent increase in wavelength of light emitted
What is red shift?	from distant galaxies.
Does red shift imply objects are moving away from or	
towards the earth?	Away from earth
If objects are moving faster, will red shift be greater or	
smaller?	Greater
Red shift has provided evidence for which theory?	Big Bang Theory
	These galaxies are all moving away from us. This
What conclusions have been drawn from the red shift	means at some point in the past they must have all
observed in distant galaxies?	been in one place, i.e. at the time of the Big Bang.
True or false: the more distant the galaxies, the greater	
the red shift that has been observed.	TRUE
If more distant galaxies are moving away faster, what	
does this imply about the expansion of the universe?	Expansion is accelerating.
Which material has been suggested to exist by the fact	
that galaxies seem to travel faster the further away they	
are from the original point of the universe?	Dark matter
Why are scientists uncertain about the origins of the	
universe?	Difficult to gather evidence.
